Summary

- Professional Frontend Engineer with 8 years of experience, specializing in JavaScript based technologies like React, React Native Node.js and building scalable user interfaces
 - Worked with both established companies and startups, both local and international, over the years that had a great positive effect on my technical skills, granted me experience with multiple Agile methodologies and deep insight into the business side of IT
 - Colleagues grew to know me for my pragmatic and business oriented mindset that I gained in startups and easygoing way of communication which formed in more established companies
 - Available for B2B contract work
-

Experience

Senior Frontend Engineer at TN-Tech *May 2022 – April 2026*

Location: Novi Sad, Serbia

Here I was engaged full-time as a Senior Frontend Engineer on long-term client assignments, including Optibus Ltd. and Yahoo Inc., with a shorter engagement

for SyncDNA.

Keywords: Outstaffing, Outsourcing, Staff Augmentation

Frontend Developer at Interexy *March 2020 – April 2022*

Location: Minsk, Belarus

Outsourcing company where I delivered frontend, fullstack and React Native work across multiple client engagements, including OurCart, TapMatch, and The Vending Bizz.

Keywords: Outsourcing, Software development, B2B

Frontend Developer at HireApp Inc. *October 2019 – February 2020*

Location: Belgrade, Serbia

Gig economy online staffing platform founded by the Poslonaut team that initially specialized in the hospitality industry, but later expanded its services to many other industries and is now worth millions. Miami, USA.

Keywords: Gig Economy, Hospitality, B2B, HRTech, Two-Sided Marketplace

Frontend Developer at Poslonaut LLC *April 2018 – October 2019*

Location: Belgrade, Serbia

The child company of Infostud, Poslonaut is a local job board platform that merged with Infostud Poslovi.

Keywords: Job board, HRTech

Projects

Optibus Ops web and Driver mobile app *Senior Frontend Engineer — TN-Tech assignment | July 2024 – April 2026*

I was tasked with engineering and implementation of company's core, high-load products: Ops dashboard for managing bus driver shifts and payments, and a Driver mobile app for driver scheduling, messaging, volunteering for shifts and posting absence or shift-swap requests.

- I optimized architecture for maintainability Ops Web Dashboard and Driver React Native app via more efficient usage of our design system, reduced technical debt, while keeping already reached stability and good user experience
- Improved my team's performance and developer experience by introducing new practices like code refinement sessions, correction of initial development estimates and others
- Alongside my colleagues, I introduced Cursor AI into all parts of our workflow; in the quarters following adoption, our team's sprint velocity improved by approximately 15%
- Shipped crossplatform UI for driver requests, resulting in drastic improvements in customer satisfaction and customer effort scores

Tech Stack and Practices: React.js, TanStack React Query, React Native, Styled Components, Storybook, React Native Web, Detox, ARIA, Jest, Docker, mbt, Sentry, Redux, Mixpanel, Cursor, Mentoring, Webpack, Security Best Practices, AWS Lambda, AWS API Gateway, AWS CloudFront, AWS S3, AWS CloudWatch, Code Review, Performance Optimization, TypeScript, Agile (Scrum, Kanban, Extreme Programming), Accessibility (ARIA, WCAG), REST API, Backend for Frontend (BFF), Multi-tenant architecture, Cross-platform development, Design System

Yahoo DSP web app *Senior Frontend Engineer — TN-Tech assignment | May 2022 – June 2024*

As a part of one of many teams working on Yahoo DSP, I contributed to development of new features and stability improvements of one of the Internet's largest, high-load advertisement platforms.

- Improved Yahoo DSP UI performance, user experience and launched new features, our teams impact resulted in customer satisfaction increase we were recognized for in the company
- Streamlined developer onboarding from 1 month to 1 week by improving severely lacking technical documentation and establishing a practice of mentoring
- Identified and resolved CI/CD bottlenecks and recurring workflow inefficiencies, improving team's sprint velocity by ~18%
- I greatly enhanced stability of application responsible for handling services valued at tens of millions of dollars daily.
- Launched an initiative for migrating Yahoo DSP from Ember.js to React
- Mentored 3 new developers joining our team

Tech Stack and Practices: Ember.js, ember-data, ember-concurrency, jQuery, Sass, JavaScript, Cypress, QUnit, Mentoring, Code Review, Accessibility (ARIA, WCAG), Performance Optimization, Security Best Practices, Multi-tenant architecture, Feature Slice Design(FSD), Design System, Webpack, CI/CD, React, Agile (Scrum, Kanban), TypeScript

SyncDNA Adobe Premier Pro extension *Senior Frontend Developer — TN-Tech assignment / June 2023 – July 2023*

I was invited to build a demo of SyncDNA extension for Adobe Premier Pro that synced data from SyncDNA Electron app that provided data from another instance of that same extension and updated user's Adobe Premiere Pro project accordingly to keep people synced in real time, main challenges of this project were extremely tight schedule and Adobe environment forcing us to use complex and sparsely documented proprietary technology.

- Helped fix bugs in the SyncDNA Electron app
- Investor demo was a complete success and funding for the project was secured

Tech Stack and Practices: JavaScript, ExtendScript, React, WebSockets, Electron

OurCart web app *Frontend Developer — Interexy assignment / Tel Aviv, Israel / May 2021 – April 2022*

OurCart's receipt processing platform where you can get a cashback for buying products of OurCart partners by just submitting a photo of the receipt.

- Covered entire codebase with unit and e2e tests
- Patched a serious security hole that left company's entire receipt dataset open for anyone to download
- Worked on AWS Lambda Functions for Chop, together with a teammate introduced AWS SAM framework to team's tech stack
- Added new features like user Profile and greatly improved user experience by fixing large number of UI bugs

Tech Stack and Practices: React, Create React App, AWS Lambda, AWS DynamoDB, Firebase, Jest, Sass, Cypress, Webpack, Code Review, Responsive Web Design, TypeScript, Security Best Practices, REST API, Backend for Frontend (BFF)

TapMatch mobile app *React Native Developer — Interexy assignment / Berlin, Germany / January 2021 – May 2021*

A social event planning app for young people. Concerts, and private and public parties near you, all can be found here.

- Created featureful and well performing map UI for the platform from scratch.
- Added Google Maps and Firebase services into React Native app and integrated it with backend

Tech Stack and Practices: React Native, Redux, Redux Saga, TypeScript, Firebase, Google Maps

The Vending Bizz *Fullstack Developer — Interexy assignment / Bakersfield, USA / March 2020 – January 2021*

Here I was the only developer, ownership, development and deployment were done entirely by me, the task was to create an online B2B SaaS platform for learning as well as running and supplying a vending machine business. In the app you can monitor your business and purchase vending machines, places for them, maintenance services or learning materials created by founder of The Vending Bizz Kashief Edwards, as well as talk to him or other vending machine entrepreneurs in The Vending Bizz chat.

- Engineered and implemented both mobile frontend and backend of The Vending Bizz
- Created The Vending Bizz Admin mobile application for internal use.
- Integrated multiple services into both backend and frontend, such as Stripe and OneSignal
- Created a Next.js vending machine location search app available via web browser and The Vending Bizz app via WebView

Tech Stack and Practices: Firebase, Redux, Redux Saga, Google Cloud Platform (GCP), React Native, XCode, Responsive Web Design, Android Studio, Next.js, TypeScript, Node.js

HireApp CRM *Frontend Developer / Belgrade, Serbia*

This side project greatly simplified our team's interaction with our own platform. Using existing REST API in record time I implemented a comfortable dashboard for our team to work with.

Tech Stack and Practices: React, Redux, Redux Saga, TypeScript, Material UI

HireApp Hero mobile app *React Native Developer / Belgrade, Serbia*

Alongside my team lead I implemented HireApp Hero application for the Miami market, achieving 5 star ratings on both App Store and Google Play

Tech Stack and Practices: React Native, React Native Testing Library, Jest, Code Review, Mentoring, TypeScript, Firebase, XCode, Android Studio

Poslonaut mobile app *React Native Developer / Belgrade, Serbia*

My first ever assignment at Poslonaut. Our app was the only entry point to the platform at the time and a lot of updates were planned for it at the time I joined the team like position bookmarking, weight parameter based sorting of job posts, user reactions etc. Within the first few weeks I gained a reputation of a reliable developer capable of making quick decisions which was crucial back then since React Native 0.47 was not a reliable tool that it's modern version is, so bringing our vision to reality took a lot of custom solutions and workarounds.

Tech Stack and Practices: React Native, Redux, Redux Saga, XCode, Android Studio

Poslonaut website *Frontend Developer / Belgrade, Serbia*

Developed the first version of Poslonaut website React frontend with server side rendering, launching the platform's web presence — the site attracted over 17% more users in its first month.

Tech Stack and Practices: React, React Testing Library, Jest, SSR, CSS, REST API, Node.js, Responsive Web Design, AWS Lambda, AWS API Gateway, AWS CloudFront, Backend for Frontend (BFF), Axios, Bootstrap

Poslonaut Kiosk application *Frontend Developer / Belgrade, Serbia*

This project was an experiment by Poslonaut and Infostud higher management. The idea was to take digitalized job search to the streets by placing kiosk machines running kiosk version of our app. I was assigned the task due to my detailed knowledge of our API and proven track record of developing high quality frontends for the company as well as knowledge of Linux that allowed me to set up secure kiosk mode for the device.

Tech Stack and Practices: React, Redux, Redux Saga, TypeScript, Axios, Kiosk mode, Linux

Skills

- **Frontend Development (Expert):** JavaScript, TypeScript, HTML, CSS, Sass, React, Redux, Redux Toolkit, RTK Query, React Native, Next.js, Ember.js, jQuery, TanStack React Query, Axios, Bootstrap, WebSockets
 - **Frontend Architecture & Best Practices (Expert):** Frontend Architecture, Frontend System Design, Responsive Web Design, Security Best Practices, Accessibility (ARIA, WCAG), Performance Optimization, Web API, CI/CD, REST API, Mentoring, Backend for Frontend (BFF), Agile (Scrum, Kanban, Extreme Programming), Code Review, Cross-platform development
 - **Cloud & Backend (Intermediate):** Node.js, Google Cloud Platform (GCP), AWS, Firebase, Docker
 - **Tooling & Testing (Expert):** Git, npm, Webpack, Jest, Cypress, Detox, Storybook
 - **Emerging Technologies (Advanced):** Rust, WebAssembly
-

Languages

- **Serbian:** Native or Bilingual Proficiency
- **English:** Full Professional Proficiency
- **Russian:** Full Professional Proficiency
