Skills

SQL (PostgreSQL, MySQL) — fluent in analytical queries, CTEs, window functions, optimization ●●●●●

Python (Pandas, NumPy, Matplotlib, Seaborn, Prophet) — analytics, ETL automation & forecasting ●●●●●

BI Tools: Power BI, Tableau, Metabase — KPI dashboards, reporting automation, data storytelling ●●●●●

Databases: MSSQL, PostgreSQL, MongoDB — relational & semi-structured ●●●●●

Profile

I don't just analyze data - I live in numbers. For me, data is not about dashboards or syntax - it's about how business breathes: what drives growth, where it leaks, and how to make every decision measurable.

With 15+ years in finance and management and over 2 years in data analytics, I combine structured financial logic with deep technical skills. I've built complete unit economics models, automated financial and BI reporting, and created dashboards that made executive decisions faster and smarter.

Fluent in SQL and Python, I connect data and strategy - validating pipelines, forecasting outcomes, and building systems that actually work. I thrive in analytical environments where curiosity, ownership, and clarity matter more than job titles.

Education

Master's degree, Accounting and Auditing

Sep 2004 - Jun 2009

Simon Kuznets Kharkiv National University of Economics, Kharkiv

Data , Data Analyst

Dec 2023 - Oct 2024

ITCareerHub.de

Employment

Financial Data Analyst — Fintech / Payments

Mar 2026 - Jun 2026

Payment Gateway / PSP (company under NDA), Remote (Project-based Contract), Cyprus

- Built Python / MSSQL pipelines for PSP reconciliation: provider file loading, transaction matching, and financial exception reporting.
- Designed **rule-driven reconciliation** — provider matching rules stored in the database, not hardcoded; a new provider is onboarded via configuration, without code changes.
- Worked with order_id / external_id matching, approved flows, chargebacks, refunds, fee logic, amount mismatches and unmatched transactions.
- Rebuilt the special transaction-chain logic for cascaded provider flows; restored correct parent-child matching across multiple providers.
- Improved reconciliation coverage from ~70–80% to near-complete matching by fixing chain logic, matching rules, fee calculation and PSP amount logic.
- Designed and automated the **Rolling Reserve calculation pipeline** in Python: daily transaction ingest, MID mapping, tariff matching by date/channel/traffic, FX conversion to EUR, reserve accruals, cap enforcement, release scheduling, and BI-ready outputs.
- Re-engineered legacy hardcoded reserve logic into a configurable, rule-driven model, making cap and release rules adjustable without code changes.
- Automated data-quality checks & alerts: missing MID mappings, tariff gaps, invalid rules, missing FX rates, cap violations, release issues and reconciliation inconsistencies.
- Processed high-volume data (100k+ rows per daily run; larger monthly reconciliation scopes) with prod-safe, read-only access to production tables.
- Investigated legacy 2024–2025 transaction and data issues that had not been detected before.

Tech: Python (Pandas, NumPy), MSSQL, SQL, Google Drive/Sheets API, Git

APIs & JSON: Google Drive/Sheets API, REST integrations, Postman, Telebot, Google Apps Script

Excel / Google Sheets (Advanced): Power Query, array formulas, VBA, automation

Analytics & Business Metrics:

PSP reconciliation & transaction matching

Unit economics modeling & financial forecasting

AARRR funnel & cohort analysis

KPI / ROI tracking, retention & churn metrics

LTV / ARPU / margin analysis

Time-series forecasting & scenario simulation

Soft Skills:

Strategic & analytical thinking

Business-oriented mindset

Problem solving & ownership

Cross-functional collaboration

Adaptability & continuous learning

Clear communication & stakeholder alignment

Data / Operations Analyst (Logistics & Geo Analytics) Nov 2025 - Jan 2026

iPOST - Courier Logistics Platform (Project-based Contract), Kyiv

- Built end-to-end analytics pipeline: raw exports - JSON normalization - PostgreSQL analytical model
- Developed BI dashboards for SLA tracking, courier performance and order profitability
- Performed geo-analytics of routes and distances, identifying cost and margin deviations
- Modeled courier capacity needs by city complexity and order density
- Connected operational and financial metrics to identify loss-making delivery scenarios
- Analyzed the tariff model (weight × distance): identified inefficiencies in cost-per-km logic that reduced delivery coverage, increased courier search time and raised the share of system surcharges; uncovered behavioral patterns and proposed tariff adjustments

Tech: Python, SQL (PostgreSQL), Power BI, Tableau, Geo APIs

Financial & Data Analyst Feb 2025 - Nov 2025

GoToYou - Marketplace Analytics & Unit Economics (Project-based Contract), Zurich

Designed a comprehensive unit economics and pricing model linking marketing, retention and operational metrics to financial outcomes. Built automated retention and conversion dashboards and implemented forecasting logic (Python + Power BI) to monitor revenue, LTV and profitability dynamics.

Result: improved accuracy of profitability forecasting and supported data-driven marketing ROI and pricing decisions.

Data Analyst (User Behavior Analysis & Business Metrics Optimization) Jan 2025 - Feb 2025

3F Venture (Project-based Contract), Luxembourg

Financial & Data Analytics System

Developed a complete analytical infrastructure for an investment holding: KPI dashboards (Power BI + SQL), automated API/CSV data integration, and financial reporting logic for portfolio tracking. Result: improved decision-making speed and data transparency for management and investors.

Data Analyst Dec 2023 - Oct 2024

ITCareerHub.de, Berlin, Germany

CRM & Funnel Optimization Analyzed marketing and CRM data to identify churn and retention patterns. Built Power BI dashboards and cohort analysis for lead-to-sale performance. Result: higher conversion rate and improved lifetime value tracking.

Data Analyst (Process Automation Analyst) Jun 2024 - Aug 2024

ALVALINE GROUP, LTD (Project-based Contract), Riga, Latvia

HR & Operations BI Automation

Automated recruitment analytics and KPI dashboards (Google Apps Script + Power BI). Integrated HR data sources, reduced manual reporting workload by 50%. Result: faster HR decisions and unified operational visibility.

Director of Finance Jun 2021 - Feb 2022

LLC "Maya to Ko", Kharkiv, Ukraine

Optimized large-scale data processing, increasing employee efficiency by 80%. Managed financial strategy and conducted in-depth financial analysis. Developed and implemented data-driven solutions to enhance operational efficiency. Collaborated with cross-functional teams to improve financial reporting and

decision-making.

Chief Accountant

Aug 2013 - Jun 2021

LLC "Danko-Toys", Kharkiv, Ukraine

Implemented data analysis techniques to streamline accounting processes.

Developed interactive financial dashboards for monitoring and forecasting.

Optimized tax reporting procedures and improved data accuracy. Strengthened counterparty relationships by improving financial data reliability.
