## Senior Technical Writer | Documentation Architect

Bar, Montenegro (Pending Residence) | [LinkedIn](#) | [ridingtheboar.com](#)

**Availability:** Remote Only (via Employer of Record / EOR)

---

## Professional Profile

Documentation Architect and Senior Technical Writer with 14+ years of experience transforming complex engineering logic into clear, high-impact user and developer documentation. Specializes in building modern **Docs-as-Code** pipelines, implementing AI-driven content automation, and authoring developer-focused API/SDK references. Proven track record of accelerating developer onboarding, reducing customer support overhead, and designing version-controlled single sources of truth that scale seamlessly alongside rapid agile lifecycles.

---

## Core Expertise

- **Methodologies:** Docs-as-Code, Diátaxis framework, Information Architecture, Structural Content Design, Technical Copywriting.
  - **Technical Stack:** Git, GitLab CI/CD, GitHub Actions, Markdown, AsciiDoc, Hugo, Antora, Static Site Generators (SSG).
  - **Environments & Tools:** Linux (Arch/Sway), Terminal-centric workflows, Shell Scripting, Command-Line Interfaces (CLI).
  - **Domains:** Enterprise Headless CMS, Cybersecurity & Password Management, IT Infrastructure, Cryptography & Encryption.
- 

## Professional Experience

### Senior Technical Writer | Perx

*October 2025 – June 2026*

- **Designed AI-Driven Content Automation:** Developed and implemented an automated, AI-powered pipeline that transforms ticket descriptions into preliminary documentation drafts before code development begins, shifting documentation left.
- **Accelerated Developer Onboarding:** Authored and restructured SDK documentation and quick-start developer guides for the Perxis enterprise headless CMS platform, significantly reducing time-to-first-integration.
- **Mended System Architecture Gaps:** Partnered with engineering and product leads to map system architecture in real-time, capturing rapid changes and ensuring developer onboarding materials stayed up-to-date.

### Technical Writer | Servicepipe

*October 2024 – November 2025*

- **Designed Automated Docs-as-Code Pipeline:** Architected and deployed a multi-version documentation pipeline from scratch using **Antora, AsciiDoc, and GitLab CI/CD**, drastically reducing documentation build-to-deploy times and ensuring zero broken links in production.
- **Tested & Overhauled Complex Technical Guides:** Audited and rewrote network infrastructure guides from the ground up, running local VMs to test and verify complex CLI commands and configuration protocols directly.
- **Automated Quality Checks:** Integrated automated linters and link-checking scripts into the pipeline, removing manual review bottlenecks and allowing the team to focus on technical accuracy.

## Technical Writer | Password

*April 2023 – May 2024*

- **Built End-User Documentation from Scratch:** Authored the complete end-user guide for the enterprise password manager from the ground up, streamlining customer onboarding and self-service.
- **Managed Git & Archbee Pipeline:** Structured and maintained the documentation source-of-truth using Git and Markdown, publishing directly through Archbee to ensure real-time content updates.

## Technical Writer | WaiDoo / AVILEX

*May 2022 – October 2024*

- **Reduced Support Ticket Volume:** Successfully decreased customer support ticket volume through strategic content auditing and restructuring using information design frameworks (Diátaxis) for large-scale enterprise software systems.
- **Enhanced Content Discoverability:** Reorganized core user guides, improving search engine optimization (SEO) and information discoverability for end-users and support agents alike.

---

## Education

### Master's Degree in Economics

*Moscow State University of Geodesy and Cartography (MIIGAik)*

- Focus on data analysis, quantitative logic, and structural frameworks applied to complex systems.

---

## Technical Projects

### Riding the Boar

- **Scope:** Personal technical platform and digital publishing project exploring technical workflows and information architecture.
- **Stack:** Linux, Hugo, Git, GitHub Pages, CI/CD automated deployment.
- **Outcome:** Serves as a live portfolio demonstrating hands-on mastery of static site generators, automated deployment workflows, and independent infrastructure management.

---

## Technical Philosophy

I treat documentation as a core component of the software engineering process. My objective is to build and maintain a Single Source of Truth that scales seamlessly alongside code. By prioritizing structured, version-controlled, and machine-readable content, I ensure documentation remains highly effective for human developers, end users, and modern AI-driven search and retrieval tools.
