SUMMARY

Project Manager with 5+ years of experience supporting full product life cycle and delivering complex, integration-heavy systems. Partnered with leadership and cross-functional teams to build predictable Agile delivery, improve team throughput, and manage stakeholder expectations. Experienced in working with high-load platforms in enterprise environments. I specialize in iteration planning, removing blockers, risk mitigation, and implementing data-driven metrics (Lead Time, CFR, Velocity). My work has reduced operational costs, stabilized releases, and helped engineering teams self-organize to consistently achieve ambitious business goals.

PROFESSIONAL EXPERIENCE

[RSHB-Intech](#)

August 2024 - November 2025

Technical Project Manager

IT subsidiary of a Top-3 National Bank (15M+ users, 100k+ employees).

My key target was to stabilize a mission-critical enterprise platform (100k+ users) suffering from a 3-month release backlog, high technical debt, and a lack of clear prioritization.

Results:

- Cut operational expenses by 40% by transitioning the team from reactive firefighting to automated regression and systematic technical debt reduction
- Increased team throughput by 25% by proactively identifying and resolving cross-functional blockers to improve delivery flow
- Maintained 100% system stability (zero P0/P1 incidents) for 12 months by implementing CI/CD quality gates and automated contract testing
- Eliminated a 3-month release backlog by introducing a transparent prioritization framework based on business value and technical ROI

Routine:

- Optimized the SDLC to eliminate requirement gaps prior to production; personally validated API contracts.
- Led a 15+ member cross-functional team as a servant-leader, replacing chaotic ad-hoc tasks with a predictable Scrum flow
- Translated abstract business requirements into high-velocity technical roadmaps, managing expectations for 20+ stakeholders
- Established a data-driven delivery culture by implementing performance metrics (Lead Time, CFR, Velocity) for objective tracking

[Innotech](#) (VTB Group Partner)

March 2023 - August 2024

Lead Technical Analyst

Major Fintech software house serving Tier-1 banking groups (20M+ customers).

My key target was to design complex enterprise services where fault tolerance and transactional data consistency are critical under high load.

Results:

- Accelerated the Discovery phase from 6 to 3 weeks by establishing standardized architectural blueprints and microservice templates
- Decreased logic-related rework by 30% by mandating rigorous peer-reviews and technical feasibility audits for system design

- Mitigated critical transactional risks by identifying and resolving architectural flaws during the early design phases

Routine:

- Modeled complex system workflows using BPMN 2.0 and UML; validated product hypotheses against infrastructure constraints
- Coordinated the rollout of REST integrations and pioneered a shift-left validation process for API contracts
- Decomposed strategic business objectives into actionable technical execution plans and owned project documentation (Confluence)
- Balanced continuous feature requests against strict system stability requirements, resolving trade-offs for executive stakeholders

[Polymatica Europe](#)

March 2021 - March 2023

Project Manager / Fullstack Analyst

International SaaS BI & Data Analytics vendor serving Tier-1 banks and retail giants.

My key target was to scale an enterprise platform and adapt product capabilities to meet the rigid compliance and performance standards of Tier-1 clients.

Results:

- Delivered a high-performance ETL module that reduced manual support overhead by 40% and freed up engineering capacity
- Achieved a 40% increase in data ingestion speed by resolving gRPC bottlenecks and optimizing SQL queries (ClickHouse)
- Maintained 99.9% platform availability for global clients by fine-tuning monitoring and failover protocols
- Significantly reduced the hotfix-to-feature ratio by enforcing stricter technical requirements and quality standards

Routine:

- Led technical negotiations with international partners to align architectural decisions with delivery milestones
- Managed the full development lifecycle of ETL components, translating business mapping requirements into technical logic
- Facilitated distributed, cross-cultural Agile teams through sprint planning, releases, and risk mitigation
- Audited data mapping and integration logic via SQL; strictly enforced the Definition of Done (DoD)

SKILLS

Project Management, Delivery Management, Agile (Scrum/Kanban), Stakeholder Management, Risk Mitigation, Cross-functional Leadership, SDLC, CI/CD, Performance metrics, System Integration, Microservices, REST/SOAP APIs, BPMN/UML, Data-driven decision making

EDUCATION

Pyatigorsk State University - Information Technology (Bachelor's degree)

TOOLS

Jira, Confluence, Postman, Swagger, Figma, Miro, Kubernetes, PostgreSQL, Redis, ClickHouse, Apache Kafka, ELK Stack

LANGUAGES

English - C1, Spanish - A2, Russian - C2

I agree to the processing of personal data provided in this document for realising the recruitment process pursuant to the PersonalData Protection Act of 10 May 2018 (Journal of Laws 2018, item 1000) and in agreement with Regulation (EU) 2016/679 of theEuropean Parliament and of the Council of 27 April 2016 on the protection of natural persons with regard to the processing of personal data and on the free movement of such data, and repealing Directive 95/46/EC (General Data Protection Regulation)
